State Contract # 986739 Goldstrike Reclamation and Monitoring

Correspondence with BLM and DWR

Doug, I went out to the mine site early this morning. The rain gauge at Guzzler # 2 showed .60 inches of rain. It was probably from a storm

last week that dumped snow at Kolob /Cedar Mountain. The heap off flow had dropped to about 4.0 GPM.

I didn't see any sign of Chukers or turkeys. The guzzlers were about 1.0 inches from the top. I counted 18 bulls and cows with yellow ear tags on Pad # 1 and couldn't make out distinct brands. The cows are breaking up the water piping where I measure heap off flow. I've been trying to reach Dave Cory with BLM to let him know about the cows. I'll call him again and send him an e-mail also. I tried to find where the cows got in at but couldn't find the source.

The East Fork was running about 1.0 CFS at Forbes cabin and was dry on the lower road to Butcher knife. The clover and alfalfa was coming up and looking good, but the cows were mowing it down fast.

The road was in bad shape. There was a lot of activity in the Pahcoon flat and Slaughter creek areas. We need some more rain now to keep the heaps green. It looks like a bad year for grasshoppers, they were everywhere.

That's all for this month-

Dan Slyter
